Technology Solutions

A MESSAGE FROM CALLSAVE

We believe technology should make life easier — not more complicated. It should keep your business connected, your property protected, your energy costs under control and your people productive. That is why we have built Callsave around a simple idea: understand the customer first, then build the right solution.

We are proud of where we come from, proud of the work we do, and even more excited about where technology is taking our customers next.

**We are not trying to be the cheapest company in the room.
We are trying to be the company our customers are happiest
they chose.**

WHO WE ARE

Callsave is a South African technology and telecommunications business based in Polokwane, Limpopo. The company says it was founded in 2001 and has grown from its telecommunications roots into a broader technology-solutions business spanning VoIP/PABX, solar, CCTV, fibre and networking. Its website describes a combined staff experience of more than 120 years and a focus on integrated solutions, practical action and long-term client relationships. [cite]turn0search0[

FROM TELECOMS TO COMPLETE BUSINESS SOLUTIONS

Our roots taught us something that still drives us today: when a business depends on technology, reliability matters. A phone system that fails, a network that drops, a camera that stops recording or an energy system that is poorly designed can all cost a business time, money and trust.

That is why Callsave has evolved beyond individual products. We increasingly think in systems: how communication, connectivity, security, energy and infrastructure work together.

OUR CORE AREAS

AREA	WHAT WE DO	THE VALUE
VoIP & PABX	Business voice systems, extensions, call routing, cloud/hosted VoIP and communication infrastructure.	Professional communication, flexibility and better control of business calls.
Solar & Energy	Solar PV, hybrid systems, batteries, energy planning and related energy solutions.	Lower energy dependence, resilience and smarter use of electricity.
EV Charging	AC charging, commercial charging infrastructure, site assessment and future DC charging solutions.	Convenient EV charging and new infrastructure opportunities for homes and businesses.
CCTV & Security	IP cameras, recording, monitoring, networked security and site-specific camera design.	Better visibility, protection and peace of mind.
Networks & Fibre	Business networks, Wi-Fi, switches, PoE, structured connectivity and fibre-related solutions.	Reliable connectivity for the systems businesses rely on.

OUR CURRENT POSITION

Callsave's public website positions the business as a one-stop technology partner for telecoms and related systems, while its contact page lists its Polokwane base at 29 Bendor Drive, Propark 1, and weekday operating hours of 08h00-17h00. [cite]turn0search0[turn0search1[

WHAT WE BELIEVE

We are not interested in selling a box and disappearing. We want to understand what the customer is trying to achieve, design a solution around the real requirement, install it properly and remain available when support is needed.

01 QUALITY OVER QUICK SALES

We would rather recommend a different solution than sell the wrong one simply because it closes faster.

02 HARD WORK IS PART OF THE PRODUCT

Site surveys, planning, cabling, configuration, testing, troubleshooting and follow-up are not glamorous — but they are what make systems work.

03 TECHNOLOGY MUST MAKE SENSE

Customers should understand what they are buying, why they need it and what it will do for them.

04 LONG-TERM RELATIONSHIPS

We want customers who stay with us because they trust us — not because they are trapped in a contract.

05 OWN THE PROBLEM

When something goes wrong, we believe the first response should be to investigate and help, not immediately point fingers.

06 KEEP LEARNING

Technology changes quickly. We have to keep learning, adapting and improving if we expect our customers to move forward.

WE ENJOY THIS

There is something genuinely satisfying about taking a customer's problem and turning it into a working solution. The moment a business hears a clear phone call after struggling with communications. The first time a new solar system starts producing. The first EV charges successfully. The cameras come online. The Wi-Fi finally reaches the whole building.

Those moments are why we do this.

WHAT MAKES CALLSAVE DIFFERENT

We know there are companies that can sell a cheaper panel, a cheaper camera, a cheaper phone system or a cheaper charger. We respect that every customer has a budget. But we also believe that price is only one part of value.

WE ARE NOT THE CHEAPEST. AND THAT IS OKAY.

We do not want to win a project because we were R2,000 cheaper and then lose the customer because the system was poorly designed, poorly supported or difficult to live with.

Our ambition is different: be the best-value partner. That means combining good equipment, proper design, professional installation, clear communication, support and a genuine interest in the customer's outcome.

CHEAPEST	CALLSAVE APPROACH
Lowest upfront price	Right solution for the actual requirement
Sell the product	Understand the problem first
Installation as a once-off	Installation + commissioning + support
Customer figures it out	We explain the system and hand it over properly
Replace when it fails	Diagnose, support, maintain and escalate where appropriate
Short-term transaction	Long-term relationship

THE CALLSAVE STANDARD

- We measure twice and install once.
- We explain what we are doing.
- We document important systems.
- We test before we leave.
- We don't pretend every problem has a one-size-fits-all answer.
- We keep improving after the installation.

Our own website describes Callsave as quality-driven and focused on innovative, integrated solutions and long-term relationships.

HOW WE WORK

Our process is designed to take the pressure off the customer. You should not need to become an electrical engineer, network specialist, telecoms expert or security technician just to make a good buying decision.

STEP	CALLSAVE PROCESS	WHAT IT MEANS
01	LISTEN	We understand the customer's current situation, frustrations, goals and budget.
02	ASSESS	We look at the site, existing infrastructure, electrical/network capacity, usage and future requirements.
03	DESIGN	We select the system architecture, equipment and supporting infrastructure around the actual need.
04	PROPOSE	We explain what is included, what is excluded, why the solution is recommended and what it is expected to achieve.
05	INSTALL	Our team coordinates the installation, configuration and integration of the selected solution.
06	TEST	We commission the system, test the important functions and identify issues before handover.
07	TRAIN	Where appropriate, we show the customer how to use the system and what to do if something goes wrong.
08	SUPPORT	We remain available for support, maintenance, upgrades and future expansion according to the applicable service terms.

ONE PARTNER. MULTIPLE SYSTEMS.

A major advantage of our broader approach is that the systems do not have to live in separate worlds. Solar can work alongside EV charging. CCTV depends on a reliable network. VoIP depends on connectivity. Network equipment benefits from backup power. Smart energy systems need communications.

That means we can look at the bigger picture — not just the individual product being purchased today.

WHY CLIENTS CHOOSE US

Every customer has different priorities. Some want lower costs. Some want reliability. Some want better security. Some want to modernise. Some simply want someone who will answer the phone when something goes wrong.

Our job is to understand which of those matters most — and build around it.

YOU NEED...	CALLSAVE CAN HELP WITH...
Better business communication	VoIP, PABX, extensions, call routing, connectivity and support.
Lower energy dependence	Solar, batteries, energy planning and monitoring.
EV infrastructure	AC charging today and commercial/DC charging planning for tomorrow.
Better security	CCTV, recording, network security and system support.
Reliable connectivity	Fibre, Wi-Fi, network infrastructure, switches and PoE.
One technology partner	Integrated thinking across communications, energy, security and connectivity.

WE ARE BUILT FOR THE LONG GAME

Callsave's public company profile says the business was founded in 2001 and has built its offering around industry experience, innovative technology, practical solutions and long-term mutually beneficial relationships.

That history matters to us. We do not want every customer interaction to be about another sale. We want to become the company you think of when something needs to be connected, powered, protected or upgraded.

THE FUTURE WE ARE BUILDING

We see a future where businesses are more connected, more energy independent, more secure and more intelligent. Where EV charging becomes part of everyday infrastructure. Where solar and storage are managed intelligently. Where communications work from anywhere. And where technology is integrated rather than fragmented.

We want Callsave to be part of that future — and we want our customers to grow with us.

LET'S BUILD SOMETHING THAT WORKS

Whether you are a homeowner looking for energy independence, a business looking to modernise its communications, a garage considering EV charging, or a company that needs security and connectivity, the starting point is the same: tell us what you need to achieve.

CALLSAVE SOLUTIONS

* SOLAR	Energy solutions designed around your consumption, backup needs and future plans.
	Energy storage for resilience, energy shifting and smarter electricity use.
< EV CHARGING	Home and commercial EV charging, with a focus on reliable infrastructure and future growth.
	Security camera systems designed around what you actually need to see and protect.
□ NETWORKS	Reliable wired and wireless connectivity for the systems your home or business depends on.
	Professional communication systems that help businesses answer, route and manage calls better.
□ FIBRE & CONNECTIVITY	Connectivity solutions that keep people, devices and business systems connected.

OUR PROMISE

We will work hard for your business. We will ask questions. We will challenge a bad idea when we believe there is a better one. We will explain the solution. We will take pride in the installation. And when there is a problem, we will work to find the answer.

Because we are not trying to be the cheapest.

We are trying to be the company you would recommend to someone you care about.
